

SubEther - The Decentralized Network

VISION

The vision of this concept is to give the user the tools needed to gain free and secure access to other users directly, without the censoring/filtering centralized third party agent in matters like for example: Communications, Information, Knowledge, Trading, Services, Politics and Transport.

SOLUTION

This goal can be achieved by making the tools available open source so that users can download all of it and host it on their own servers or just run it as an application on their phones. By being connected to the decentralized network it will be possible to get direct and secure access to others using these tools for matters described in the vision.

DEVELOPMENT

The further development of this tool will be possible through open source programmers dedicating their free time, crowd funding or other kind of community funding and premium licenses for companies that will further the development and maintain the quality of the product that will benefit everyone using it, be it users using it for free or companies that use it in a for profit environment.

SUBETHER

The meaning of the name SubEther is that the fifth element Ether described as the force, energy or consciousness is expanding into a new unconquered reality a sub reality creating a new universe inside this reality, using this tool as a medium to gain access to the unlimited potential where imagination is the limit.

DECENTRALIZATION

Instead of everyone's data being contained on huge central servers owned by a large organization, local servers ("nodes") can be set up anywhere in the world. You choose which node to register with - perhaps your local node - and seamlessly connect with the SubEther community worldwide.

FREEDOM

You can be whoever you want to be in SubEther. Unlike some networks, you don't have to use your real identity. You can interact with whomever you choose in whatever way you want. The only limit is your imagination. SubEther is also Free Software for non profit use, giving you liberty to use it as you wish.

PRIVACY

In SubEther you own your data. You do not sign over any rights to a corporation or other interest who could use it. With SubEther, your friends, your habits, and your content is your business ... not ours! In addition, you choose who sees what you share, using Permissions protected with strong encryption.
